- Report the errors and bugs faced during the phase of testing.

Project Details

Secured Smart Home on IoT Using Dynamic Key Generation and Validation

In future the whole world is going to be developed in all the ways as it can be. In that Smart home will plays an important role. Due to this there will higher probabilities of threatening. The activities of the users are stored in internet because we used IoT Technology. So, there is chances of intruding the database and our information being collected and misused against us. To avoid this, we are generating dynamic keys for each and every data transmission through internet. This will not able to be intruded and therefore it provides a much better security.
